

Field: Article Side Panel

A side panel with resource IDs to feature

Category: Waterlogic fields - Articles

The side panel field should only be used with the Side panel layout as it relies on additional settings and configurations not present on other layouts. By default, it will pull in the latest 5 children articles published, however, you can enter up to 5 resource IDs to feature instead. There is also an option to add in Social Follow Us links which are controlled by system settings based on website context.
