

Field: WL Icon CTA

WL Icon CTA.

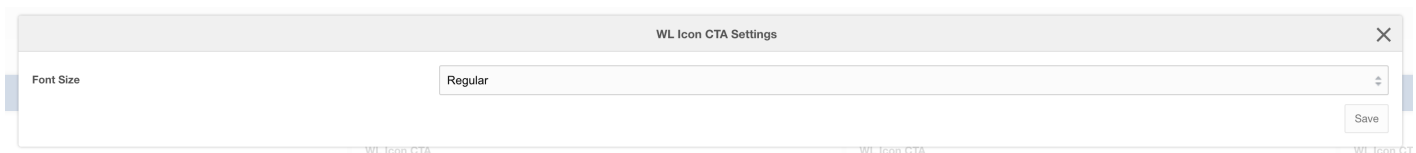

Icon and link text call to action with icon option of top or left.

Category: Waterlogic Fields.

The screenshot shows a configuration interface for the 'WL Icon CTA' field. The interface is titled 'WL Icon CTA' and 'Icon and link'. It features several dropdown menus for configuration: 'Icon' (set to 'Cup'), 'Icon Colour' (set to 'White'), 'Text Colour' (set to 'White'), 'Icon Position' (set to 'Top'), and 'Hyperlink Type' (set to 'Resource ID'). There are also 'Add Content' and 'Add Layout' buttons at the bottom.

Additional settings found within the cog on the top right of the field:

The screenshot shows a 'WL Icon CTA Settings' dialog box. It has a title bar with a close button. The main content area shows 'Font Size' set to 'Regular'. There is a 'Save' button in the bottom right corner.

Font size: The font size of the icon. Default to Regular.

Settings

Icon: Select the icon from the dropdown list (if extra icons are required these will need to be added in.)

Hyperlink Text: The text for the link.

Text colour: What colour should the text be?

Icon Position: Where should the icon appear within the field. Top or left of the content. Default Top.

Hyperlink Type: The type of link. Options include Resource ID, External URL, Modal or Scroll to

ID. Default to Resource ID.

Hyperlink Destination: Relevant to hyperlink type if:

- Resource id - Choose a resource ID
- External URL - a full url to link to including https eg. <https://www.waterlogic.com>
- Modal - The modal ID as created within the modal field. (
<http://websitedocs.waterlogic.com/books/content-blocks/page/layout-full-page-modal>)
- Scroll to ID: If you would like to scroll to a section within the page. Add a unique ID to the layout setting and reference this here.
- Chat Popup - This setting adds logic to the button to allow the chat popup to appear. Each context must have chat JS applied to trigger chat to open.
- Relative URL - This will point to a file locally within the server relative to the context base_url e.g. for [waterlogic.com/en-gb/](https://www.waterlogic.com/en-gb/) the base url is `/en-gb/` and if you wanted to include a link to a pdf in the uploads folder the button destination would be `uploads/mypdf.pdf`. the final output to the site will be `/en-gb/uploads/mypdf.pdf`
